Dear Student,

There were lot of queries and requests raised by you and your friends on taking the online end semester examination through online mode in CodeTantra platform. Taking note of all the queries and requests and keeping the interests of the students uppermost in our minds we have enabled few additional changes.

1. **For all Programmes under Faculty of Engineering and Technology, the duration of the examination is extended from 90 minutes to 120 minutes.**

2. In the CodeTantra platform, the navigation among the questions is enabled now and you can move forward or backward and can answer any question in any order. The **"jump to"** displayed at the top will help you to quickly navigate as shown in the following snapshots.
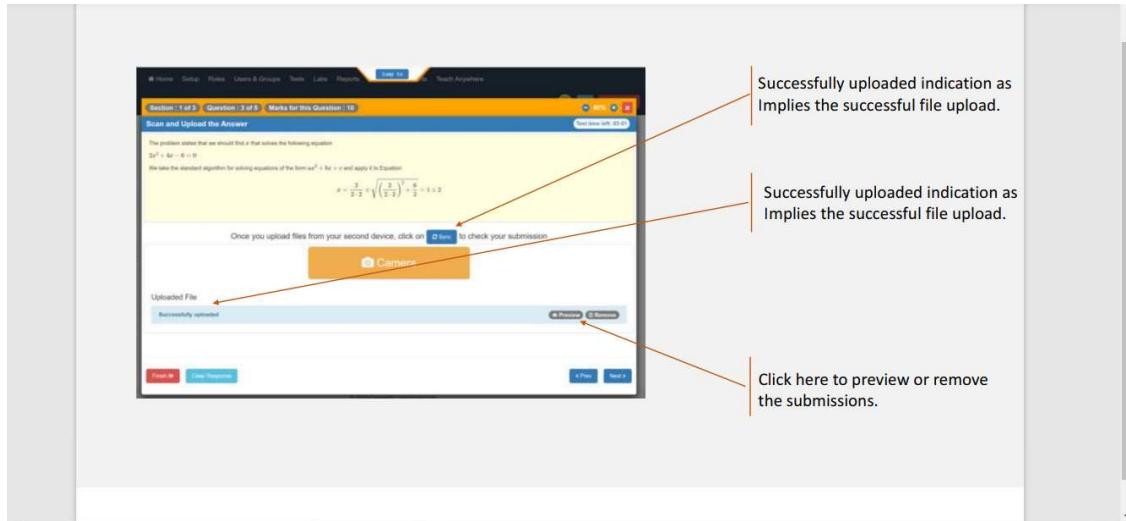

3. Kindly **do not use laptop camera for uploading the answer**. Use the mobile phone for scan and upload.

4. For uploading the answer do not click the camera button that is shown in the pic below, instead you need to use your camera in the already logged in mobile to scan the document and upload. Once the upload is successful in the mobile, hit on the **"sync"** button in the laptop as shown in the picture to complete the upload process. You can even preview or remove the document before proceeding to the next screen.

5. Once you have answered all your questions, you can click the FINISH button. The FINISH button will not be enabled for the first 30 minutes of the commencement of the examination.
